

# Chemuniqué International

## Driving efficient and sustainable animal production

Since Chemuniqué's humble beginning in the mid-1990's, we have grown to become an accepted contributor to the Southern African livestock industry. Our product portfolio is achieved through exclusive working relationships with leading international organisations who are at the cutting edge of technological advancement in animal nutrition.

Through our relationship with leading organisations such as Danisco (DuPont) and Zinpro Performance Minerals we are able to supply tried and tested, technically innovative nutritional solutions which are focused entirely towards the livestock industry. These solutions must show repeatable performance and economic benefit for our customers.

We recognize the importance of customer service and adding value to the industry, therefore much emphasis is placed on the service we render both technically and commercially.

We are also proud to introduce a full team of technical nutritionists as well as a very capable and dedicated office team. Each individual member makes a significant contribution to the success of Chemuniqué.

In 2011, Chemuniqué decided it was time for a new look, which fitted our approach to support the ever changing industry as well as to lead the way in the innovation and sustainability of livestock production in Southern Africa.

On the 30th June 2011, we held a launch of our exciting new product (AXTRA XAP) at Kloofzicht lodge in Muldersdrift. At this event the new look, together with our vision for the future were unveiled.

Thank you to all of our customers who attended this event.
